

Q1	<p>a. Consider the signal shown in figure 1.</p> <div style="display: flex; justify-content: space-between; align-items: center;"> <div style="flex: 1;"> $y(t) = \left(\frac{-1}{2}\right)x(-3t + 3)$ <p>(i) Sketch the signal $x(t)$.</p> <p>(ii) Sketch the even and odd part of $x(t)$.</p> </div> <div style="flex: 1; text-align: center;">  <p style="text-align: center;">Figure 1</p> </div> <div style="flex: 0.1; text-align: right; vertical-align: middle;">[12]</div> </div> <p>b. A causal LTI system with input $x(t)$ and output $y(t)$ is described as</p> $\frac{dy(t)}{dt} + y(t) = \frac{dx(t)}{dt} - x(t);$ <p>Find the output $y(t)$ of the system if the input is $x(t) = e^{-t}u(t)$.</p> <p style="text-align: center;">***All the sketches need to be clear and legible, with proper labeling of the x-axis and y-axis values***</p>	
Q2	<p>Determine and sketch the overall impulse response ($H[n]$) of the system shown in figure 2,</p> <p>where</p> $h_1[n] = (2)^n u[-n];$ $h_2[n] = (a)^n u[n];$ $h_3[n] = \delta[n] - (a)\delta[n - 1];$ $h_4[n] = [n - 1]u[n];$ $h_5[n] = \delta[n] + nu[n - 1];$ <p>$H[n]$ should be sketched for range $-5 \leq n \leq 5$</p> <div style="text-align: center;">  <p style="text-align: center;">Figure 2</p> </div> <p style="text-align: center;">***All the sketches need to be clear and legible, with proper labeling of the x-axis and y-axis values***</p>	[13]

Q3 Figure 3 shows periodic signals having exponential Fourier series coefficients as shown below: [13]

$$x_1(t) \stackrel{FS}{\leftrightarrow} a_k, \quad x_2(t) \stackrel{FS}{\leftrightarrow} b_k, \quad \text{and} \quad x_3(t) \stackrel{FS}{\leftrightarrow} c_k$$

- Using Fourier series properties (differentiation and linearity), compute a_k . Sketch $|a_k|$ vs k for the range of one period of the signal $x_1(t)$.
- What is the relationship between $x_1(t)$ and $x_2(t)$? Obtain b_k in terms of a_k .
- What is the relationship between $x_1(t)$ and $x_3(t)$? Obtain c_k in terms of a_k .

Figure 3

All the sketches need to be clear and legible, with proper labeling of the x-axis and y-axis values

Q4 Figure 4a shows two bandlimited signals $m(t)$ and $p(t)$, having Fourier transform $M(j\omega)$ and $P(j\omega)$, respectively. Figure 4b shows a transmission scheme. Assume $q(t) = 2 \cos(100t)$, and $s(t) = q(2t)$. Determine and sketch Fourier transform of $q(t)$, $r(t)$, $s(t)$ and $z(t)$. [12]

where $q(t) \stackrel{FT}{\leftrightarrow} Q(j\omega)$, $r(t) \stackrel{FT}{\leftrightarrow} R(j\omega)$, $s(t) \stackrel{FT}{\leftrightarrow} S(j\omega)$, and $z(t) \stackrel{FT}{\leftrightarrow} Z(j\omega)$,
