

**Birla Institute of Technology & Science, Pilani**  
**Second Semester, 2017-18**

**Comprehensive Examination (Closed Book)**

**Course Name: MATH F231 (Number Theory)**

**Date: May 5, 2018 (Saturday)**

**Max. Time: 180 Minutes**

**Max. Marks: 45**

---

**Note:1. Answer all sub-parts together.**

**2. Start new question from fresh page.**

**3. Symbols have their usual meaning.**

**4. Please write END at the end of the answer script.**

**Q1.** State and prove the Euler's theorem. **[4]**

**Q2.** Prove that  $\phi$  is a multiplicative function. **[6]**

**Q3.** Prove or disprove:

**(a)** The sum of two primitive roots modulo an odd prime  $p$  is a primitive root of  $p$ .

**(b)** If  $p \equiv 3 \pmod{8}$  is an odd prime and  $a$  is a quadratic non residue of  $p$  then  $2a$  is a quadratic residue of  $p$ .

**(c)** 17 is a quadratic residue of 33.

**(d)** For an odd positive integer  $a$ ,  $a^{2^n} \equiv 1 \pmod{2^{n+2}}$ , for  $n \geq 1$ .

**(e)** The only solution of  $\phi(mn) = \phi(m) + \phi(n)$ ,  $m, n \in \mathbb{N}$  are (2, 2), (3, 4) and (4, 3).

**(f)** The linear system  $x \equiv 3 \pmod{4}$ ,  $x \equiv 4 \pmod{5}$ ,  $x \equiv 4 \pmod{6}$  has unique solution modulo 60. **[3x6=18]**

**Q4.** State and prove the Euler's criterion for a least positive residue modulo an odd prime  $p$  to be a quadratic residue of  $p$ . Hence, conclude whether a primitive root modulo an odd prime  $p$  can be a quadratic residue of  $p$  or not? **[6]**

**Q5.** State and prove the Gauss' lemma and use it to check whether 6 is a quadratic residue of 19 or not? **[6]**

**Q6.** Prove that a positive real number is rational iff it can be written as a finite simple continued fraction. **[5]**
